

# XL POD

## INSTRUCTIONS

Fully charge the battery before your first use to ensure long battery life.

**Changing XL Pods** When your pod no longer creates vapor or there is a slight burning taste simply remove the pod and replace. When replacing insert fully with a slight twist to align the interior tabs. Make sure the pod is fully seated into the battery.

**Charging** when the LED Light on the bottom of your battery is flashing, insert the supplied usb-c charging cord and connect to your choice of power supply (wall adapter, computer). When charging, the led light will remain on and will turn off when charging is complete. As with any electrical device, charge on a stable fire-resistant surface clear of debris. We recommend you only use the charging cords supplied. As with any battery charging device, do not leave unattended for long periods of time.

**Battery Safety** Never carry any battery in your pocket or other closed area on your body as an additional safety precaution - especially mixed with other items including metal. Always charge batteries on a fireproof surface and make sure there are no flammables within at least 6 feet while unattended. Remove batteries from chargers as soon as you are able when they are fully charged. All our batteries are equipped with over charge and error detecting technology, but if there is physical damage to a battery or charger these safety mechanisms may become inoperable. If your battery becomes significantly wet or suffers physical damage, discontinue use and contact us for an exchange.
